### **Creating New Spaces with Technology**

Springer Nature

An introductory text providing explanations of motor vehicle technology. Each chapter in the book takes the reader through the details of each

component system, and also includes checklists for fault finding and maintenance, and a number of practical projects.

The graduates from

Technology education institutions (Technical Training Institutes and national Polytechnics) have contributed a lot to the industrial growth and the 'Jua kali' sectors. The diploma and certificates which are awarded by Kenya National Examinations Council

(KNEC) have increased the number of graduates who have acquired skills and knowledge that is in high demand in the world of work, both in informal and formal sectors. But many of these young men and women who have desired to join others in developing this nation have been stopped on the way or discouraged or delayed in acquiring their diploma in Mechanical Engineering based areas. Many candidates don't pass Mechanical Technology subject. Therefore this study set to

investigate the poor performance of candidates in mechanical technology subject in Technical training institutions.

Becoming Somebody in Teacher Education IDRC

This title explores an area of tertiary education that is currently understudied; this is the extent and nature of differentiation and articulation in African tertiary education systems. The overall finding is that the binary system is dominant, characterised by universities and

polytechnics as distinct types of institutions. Differentiation is clearly evident in Africa.

However, though varied in nature and extent, the differentiation is mostly horizontal as opposed to vertical. Articulation, on the other hand, seems to be in its infancy as some universities, in their admission requirements, d.

Kenya Citizens' Handbook 2002 Springer

This book sets out to bring voices of the South to the debate on localization of education and makes the case that it should be considered a right in education. Despite all the scientifically-based evidence on the improved

quality of education through the use of a local language and local knowledge, English as a language of instruction and “Western” knowledge based curriculum continue to be used at all educational levels in many developing nations. This means that in many African countries, the goal of rights to education is becoming increasingly remote, let alone that of rights in education. With this understanding and with the awareness of the education challenges of millions of children

throughout Africa, the authors argue that local curriculum through local languages needs to be valued and to be preserved, and that children need to be prepared for the world in a language that promotes understanding. The authors make a clear case that policy makers are in a position to work towards a quality education for all as part of a more comprehensive right-based approach. We owe it to the children of the South to offer the best quality education possible

in order to achieve social justice.

A main staple of today's world that has played a key role in the

development of society is education and institutions of higher learning. An ongoing concern, however, has been the lack of access and resources to superior teaching in developing areas of the world.

Student engagement and learning environments are just a few elements that play into the success of

colleges in areas like the Coast Region of Kenya. Research must be done in understanding the correlation between the tools that these institutions are equipped with and the educational results of their students. *Effects of Engagement and Resources on Learning Outcomes in Vocational Colleges: Emerging Research and Opportunities* is an essential reference source that discusses the relationship between college resources and students' learning

outcomes as well as contributing factors in promoting quality education and training. Featuring research on topics such as research philosophies, teaching workloads, and student engagement, this book is ideally designed for teachers, deans, researchers, education professionals, administrators, policymakers, government officials, and academicians seeking coverage on the methods of acquiring and maintaining quality

education in developing countries.

*African Women and ICTs*  
LAP Lambert Academic Publishing

This volume emphasizes the role of chemical education for development and, in particular, for sustainable development in Africa, by sharing experiences among specialists across the African continent and with specialists from other continents. It considers all areas and levels of chemistry education, gives specific attention to known major challenges

and encourages explorations of novel approaches. The chapters in this book describe new teaching approaches, approach-explorations and in-class activities, analyse educational challenges and possible ways of addressing them and explore cross-discipline possibilities and their potential benefits for chemistry education. This makes the volume an up to date compendium for chemistry educators and educational researchers worldwide.

For many scholars, the study of community and community development is at a crossroads.

Previously dynamic theories appear not to have kept pace with the major social changes of our day. Given our constantly shifting social reality we need new ideas and research that pushes the boundaries of our extant community theories. Theory, Practice, and Community Development stretches the traditional boundaries

and applications of well-established community development theory, and establishes new theoretical approaches rooted in new disciplines and new perspectives on community development. Expanded from a special issue of the journal Community Development, Theory, Practice, and Community Development collects previously published and widely cited essays, as well as new theoretical and empirical research in community development. Compiled by the editors of

Community Development, the essays feature topics as varied as placemaking, democratic theory and rural organizing. Theory, Practice, and Community Development is vital for scholars and practitioners coming to grips with the rapidly changing definition of community.

**International Perspectives on Teachers Living with Curriculum Change**

Springer Science & Business Media

“This book gives a voice to English language teachers faced with the

challenges posed by English language curriculum change. As a core component of national state system curricula in virtually every country in the world, there has nevertheless been little research exploring how the millions of English teachers worldwide navigate the challenges posed by such curriculum changes. This volume includes eleven stories from teachers based across every continent, providing a global glimpse of how national English

curriculum change projects have been experienced by classroom teachers who are commonly (if erroneously) viewed as mostly responsible for its implementation success or failure. The final chapter synthesises these experiences and suggests wider implications for the development of curriculum change planning processes, and how they might better support teachers’ attempts to achieve curriculum goals. Edited and authored by leading

experts in the field, this ground-breaking collection will be of interest to students and scholars of English language teaching, teacher education, curriculum change and education policy.”

Thermal Engineering in Power Systems Motivate S.

The book covers the state-of-the-art treatment in modelling and experimental investigation of the mechanical behaviour of cellular and porous materials. Starting from the continuum mechanical modelling, to the numerical simulation, several important questions related to applications such as the fracture and impact

behaviour are covered.

*Kenya National Assembly Official Record (Hansard)*

Research and development in thermal engineering for power systems are of significant importance to many scientists who are engaged in research and design work in power-related industries and laboratories. This book focuses on variety of research areas including Components of Compressor and Turbines that are used for both electric power systems and aero engines, Fuel

Cells, Energy Conversion, and Energy Reuse and Recycling Systems. To be competitive in today's market, power systems need to reduce the operating costs, increase capacity factors and deal with many other tough issues. Heat Transfer and fluid flow issues are of great significance and it is likely that a state-of-the-art edited book with reference to power systems will make a contribution for design and R&D engineers and the development towards sustainable energy

systems.

### **Rights in Local Languages and Local Curriculum**

This book explores the ways in which women in Africa utilize Information and Communication Technologies to facilitate their empowerment; whether through the mobile village phone business, through internet use, or through new career and ICT employment opportunities. Based on the outcome of an extensive research project, this timely books

features chapters based on original primary field research undertaken by academics and activists who have investigated situations within their own communities and countries. The discussion includes such issues as the notion of ICTs for empowerment and as agents of change, ICTs in the fight against gender-based violence, and how ICTs could be used to re-conceptualize public and private spaces.
